(54) Title: POWER CONNECTOR

(57) Abstract: A power connector including an insulating shell, a first terminal and a second terminal. The first terminal is disposed on the insulating shell and includes a contact part extending into the accommodating cavity of the insulating shell. The second terminal includes a metal housing covering and engaging the outer surface of the insulating shell. A resilient arm extends from the metal housing into the accommodating cavity of the insulating shell. The underside of the metal housing can be soldered to the circuit board resulting in a great mechanical and electrical connection to the circuit board.
